Interim Summary. Object is ~~near~~ near water. At times it feels as if it is actually on water. It is long, narrow + flat-bottomed. It is metallic w/ metal construction. It has a controlled environment - artificially lighted to simulate day/night, constant temperature, controlled air. Object is mobile, but not independently. Requires hook-up to another Object in order to be moved or re-located. There is a research/testing ambience to Object. There is a ping-pong sound-like sounds bouncing off other Objects (Ambience - radar/sensor concept). There are flexible hoses going to the Object. From one end there is a recessed square transducer window / plate. It is dark inside with

waves of light refraction.

Additional data - next page

Objekt has temporary wheels for mobility, hydraulic
action, solid short metal plate front-end,
a ramp on the side with a walkway the
length of Objekt. There is a smaller Objekt
adjacent to the primary that seems to
be a source of power. Sensor-like.
